Windows Store will not install apps

Hello all!

This is a problem that I cannot solve on my own. Google was not of much help either.

I can get to an app download page, but the moment I click install the window vanishes and reappears instantly.

I made a screen recording of this happening so that everyone is on the same page.

Oh, and here are the codes that I got from google searches.

Code:

```
Set-ExecutionPolicy Unrestricted

Get-AppXPackage -AllUsers | Foreach {Add-AppxPackage -DisableDevelopmentMode -Register
```

Code:

```
WSReset.exe
```
